(54) Title: DISPLAY AND INPUT DEVICE

(57) Abstract: A display and input device, comprising a substrate (30), for example a flexible conducting foil, comprising a front surface (8) and a rear surface (10); a plurality of layers (32, 34, 35, 36, 37, 39) provided on the front surface (8) of the substrate (30), the plurality of layers (32, 34, 35, 36, 37, 39) being operable as a display, for example an electrophoretic display, viewable from the front surface side of the device; and circuitry (52, 54) connected to the substrate (30) for detecting capacitive coupling between a user's finger (12) and the substrate (30) such that the substrate (30) is operable as a touchpad for sensing a user's finger (12) touching, or being located in close proximity to, the rear surface (10) of the substrate (30).
